

HANSA QUALITY FITTINGS FOR INNOVATIVE BATHROOM AND KITCHEN ENVIRONMENTS

AN INTERNATIONAL PLAYER THROUGH ITS MEMBERSHIP OF THE ORAS GROUP, A CORPORATION WITH TWO STRONG BRANDS: HANSA AND ORAS.

Hansa Armaturen GmbH is one of the top three sanitary fittings manufacturers in Germany and Austria, with subsidiaries and agencies in more than 60 countries. Founded back in 1911, the company has been specialising in high-end sanitary fittings since 1950. In September 2013 the Stuttgart-based company merged with Finnish sanitary fittings manufacturer Oras – the market leader in Northern Europe – to create the new Oras Group.

The Group is the market leader in the Nordic countries and a leading player in Central Europe, with production facilities at four European locations in Germany, the Czech Republic, Poland and Finland. The Oras Group, which employs its own workforce on 20 markets, is part of the family company and industrial owner Oras Invest.

INNOVATION

New products. New competencies.
New possibilities.

INTELLIGENCE

Understand. Connect. Change.

IDENTITY

Character. Distinctiveness. Trust.

QUALITY

Uncompromising. Holistic. Tangible.

QUESTION

Surprise. Inspire. Amaze.

QUINTESSENCE

Responsibility. Reliability. Experience.

The drive to keep thinking ahead, to keep changing things, to keep coming up with new developments, is an essential characteristic of the HANSA brand. That is more true than ever now that HANSA is part of the Oras Group: It is a melting pot of competencies. It is a convergence of synergies. It is an innovative, ground-breaking force, growing ever stronger and more dynamic. The result is an entirely new generation of products: more clever, more flexible, and more convenient than ever before – yet always unmistakably HANSA. Our **GENERATION IQ** is being introduced into private bathrooms and kitchens, into public facilities, and into the care sector.

In all its applications, it is changing the way we look at – and use – sanitary fittings.

GENERATION IQ incorporates new-style concepts as well as surprising enhancements of familiar products. Experience fascination! Discover the possibilities!

NATURE BROUGHT TO LIFE INDOORS: HANSAMURANO X

All you have to do to regulate the water temperature is gently tap the temperature markers with your finger. Blue and red lights act as unambiguous visual indicators.

The experience of light, colour and water: Controlled by sensors built-in to the glass panel, HANSAMURANO X reacts in two stages when you move towards it. First a soft light comes on by way of welcome. When your hands get close to the fitting, it starts its flow, the light impressively illuminating the clear curtain of water.

Elemental and high-tech; the freedom of nature in a stylish interior: HANSAMURANO X brings opposites together. Effortlessly. Uncompromisingly. As the architecture cultivates the open water, so the water brings life to the clear structures of the architecture. Intelligent interplay of different elements is the fitting's guiding principle. It underpins the philosophy of its design and its operator control concept. The central element is the seemingly floating metal and glass body, which serves as both the control and the water outlet. And just as fascinating as the user's interaction with the fitting is the way the water emerges: as a wide, transparent gush; gentle and soft as if from a fresh spring; clear and precise as if styled by a designer. Controlled by an invisible electronic unit, HANSAMURANO X offers intelligent comfort, pure experience and the luxury of perfect formal simplicity. A strong personality, highly independent in character, yet unmistakably at home within the HANSA|EDITION premium segment.

Despite its styling as a solitary element, seemingly floating in isolation, HANSAMURANO X is continually interacting. Its design is symbolic of that characteristic. With its transparent glass panel, sandwiched by two high-gloss chrome elements, HANSAMURANO X reflects its surroundings and visually breaks down barriers. Reflective and integrating, it acts as an interface linking nature and the interior, people and technology.

GENERATION

WATER. LIGHT. COLOUR. HANSA|EDITION

With **HANSAMURANO X** the **HANSA|EDITION** range has now been reinvigorated. The exclusive segment with its solitary fittings has established itself as the supreme embodiment of HANSA's philosophy: Water is set free, to stage spectacles and reveal its qualities at the highest level. Unifying design and function, **HANSA|EDITION** fittings embody a visionary idea realised with uncompromising style: Each of them is archetypal in its own unique way.

And state-of-the-art technology also plays a key role in **HANSA|EDITION**, implementing its unconventional operator control concepts and bringing special effects to life. Nevertheless, the electronic controls needed to orchestrate the dramatic water show are always integrated organically into the product – compact units hidden away from view. Thus ensuring perfect functionality and simultaneously providing maximum creative freedom.

„Experience Water“ is our philosophy. **HANSALATRAVA** is the fitting which takes that philosophy to a new peak. **HANSALATRAVA** is incomparable – an icon, original in its styling, and in its orchestration of water.

As a state-of-the-art interpretation of historic wells, **HANSAMURANO** embodies the essence of modern-day bathing culture. Often copied, **HANSAMURANO** is the true original. Its water play draws us under its spell: still – and in the echoes of its origins, more than ever.

HANSACANYON draws its power and magic from the interplay of elements: the dynamic water coming up against the static material. The slim, monolithic body of the **HANSACANYON** guides the water flow, accompanied by spectacular light, colour and mirroring effects.

GENERATION

THE AESTHETICS OF A NEW INTELLIGENCE:

HANSASIGNATUR

A smart choice nowadays is a multi-dimensional one, blending together pleasure and good conscience; aesthetics and intelligence – the choice for a generation of fittings adhering to the principle of fusion, not exclusion.

HANSASIGNATUR is the protagonist of that generation: visionary, smart, unique. Never before has a range of fittings been so entirely focused on the needs of progressive-thinking users. The dual structure of the HANSASIGNATUR washbasin fitting, with its separate lever and spout layout, is strictly ergonomic in design and translated into an orgametric formal language. The organic fusion of precise geometric shapes creates a look which has never been seen before. With its likewise dualistic, intuitive operator control concept and intelligent applications, HANSASIGNATUR is changing our definition of the word “fitting” – and above all the way in which we will use water in the bathroom in future: maximum comfort, controlled, flexible, sustainable.

Always different, never the same: HANSASIGNATUR opens up a different perspective from every angle. And with every turn of the spout, every setting of the lever, the expressive fitting reveals a new form.

There is nothing comparable: HANSASIGNATUR HYBRID works manually using the lever or by non-contact sensory operation. Water at the pre-set temperature automatically flows when your hands are detected by the sensors. That is comfortable and hygienic, and saves water and energy.

Hygiene from head to toe, in complete comfort: The Bidetta hand shower – also available with remote operating option – is a mobile water source fitted beneath the washbasin which extends the usage range of the fitting to a 1.5 m radius. Whether for washing your hair, for intimate hygiene in place of a bidet, filling tall containers, or cleaning dirty objects: HANSASIGNATUR with Bidetta gives you supreme flexibility.

GENERATION

FOLLOW YOUR INTUITION: IN THE HANSASIGNATUR BATHROOM

Translating the intelligent HANSASIGNATUR concept from the washbasin to all areas of the bathroom, the fitting finds its ideal partner in the latest generation of the HANSAMATRIX concealed component system.

Unchanged in structure, logic and layout, HANSAMATRIX for the first time utilises mains-powered intelligent electronics with control technology hidden behind the wall. This provides the basis for an entirely new, intuitive way of controlling bath and shower fittings – and so creates an entirely new way of using water, enjoying its sensuality, yet conscious of the need to use it rationally.

The minimalist, strictly geometric design of the electronically controlled HANSAMATRIX components is compatible with multiple ranges. This makes it possible to combine matching products from the HANSA|LIVING segment, creating significantly more freedom of design planning.

HANSAMATRIX with control technology completely redefines user comfort. The Tiptronic control buttons are intuitive to operate – and raise awareness of the use of water based on visual indicators

GENERATION

EMOTIONAL INTELLIGENCE: HANSA|LIVING SENSORY FITTINGS

All the ranges within the **HANSA|LIVING** segment have a distinct formal character and offer extensive options for design planning. Now that special design quality has been perfectly combined with a new functional quality: touchless sensory operation.

The innovative electronic washbasin fittings of the **HANSALOFT**, **HANSALIGNA** and **HANSASTECLA** ranges are united by a fascinating style – and by their promise of maximum comfort. The sensory operation of the fittings is not just convenient, hygienic and safe however. It helps above all to conserve valuable resources, enabling users to incorporate awareness of ecological concerns into their everyday lives without need for aesthetic compromise.

It is the holistic approach which is characteristic of the ranges in the **HANSA|LIVING** segment. The electronically controlled variants of **HANSALOFT**, **HANSALIGNA** and **HANSASTECLA** add a further dimension to it.

HANSALOFT sensory

As each of the new electronic fittings – here **HANSASTECLA** – embodies the characteristic design of its range, the unmistakable design context is retained throughout the bathroom.

When your hands approach the sensor-controlled fittings – here **HANSALIGNA** – water flows automatically: always exactly at the pre-selected temperature; always exactly at the rate required.

In the **HANSALOFT** sensory range, intelligent technology not only implements the expressive design, it highlights it even more strongly.

GENERATION

*e*LECTRONIC. *e*FFICIENT. *e*FFORTLESSLY *CL**e*VER: HANSA*SENSe*TION

HANSALANO is a supremely elegant and user-friendly solution for the modern private bathroom.

The now expanded HANSAFIT range incorporates clever solutions for “vital living” in all areas of the bathroom: ergonomically optimised throughout, easy to use, offering maximum safety.

With its electronic control and high-tech look, HANSAFORSENSES delivers holistically modern showering pleasure. Another new feature is the shower system in exclusive-looking black.

HANSACONCERTO is a highly versatile range which meets even very specialised requirements, such as in public facilities or in the care sector. The new features within the range also include this cold water-only fitting.

HANSAFIT sensory

They feature different operator control concepts, are very varied in their styling, and can be used for both private and public facilities. But all HANSASENSE*TION* fittings have one thing in common: they offer intelligent functionality which greatly enhances levels of comfort and convenience for the user. That is particularly true of the non-contact sensory HANSASENSE*TION* models. These clever electronic fittings are easy to use and environmentally friendly, so making a daily contribution to a more ecologically aware lifestyle. You save water and energy every time you use them.

All four ranges in the latest HANSASENSE*TION* segment also incorporate lots of new design and functional variants for the bathroom and kitchen, as well as for public facilities. And of course, all HANSASENSE*TION* fittings are just as reliable and durable as you would expect from HANSA products.

GENERATION

ONE RANGE. LOTS OF FUNCTIONS. FOR ALL GENERATIONS. HANSAFIT

Perfect hygiene from head to toe: The **Bidetta** hand shower is installed at the washbasin, opening up an entirely new range of potential applications. The mobile water source extends the range around the washbasin to a radius of 1.5 metres, offering plenty of scope for many versatile uses. Whether for convenient intimate hygiene, washing your hair, or cleaning dirty objects: the clever **Bidetta** hand shower gives you supreme flexibility.

Ingenious: The Tiptronic Flex button can be positioned anywhere on the washbasin, and works like a remote control. When it is pressed, pre-mixed water flows out at a pleasant temperature, without having to open the fitting. This is a highly user-friendly feature for children and older people especially, because it makes the water flow easy to start and stop. An additional safety feature is the automatic stop after 6 seconds by default. The stop can be set to a custom time between 4 and 15 seconds

HANSAFIT is a range of fittings which offers a surprising and impressive diversity of choice. The now expanded range incorporates clever solutions for multi-generational bathing: ergonomically optimised throughout, easy to use, offering maximum safety. The highly versatile HANSAFIT really shows all its capabilities at the washbasin. Alongside a sensory electronic fitting, there are three lever mixer variants: the "classic"; with a separate Tiptronic-Flex pushbutton for user-friendly remote control; and with the **Bidetta** hand shower.

All variants feature the new-style special lever in contrasting colour with non-slip, insulating soft-touch surface finish. Pressing the **ECO** button reduces the water flow rate by 50% to an economical 6 litres per minute.

Important for people with allergies: HANSAFIT washbasin fittings have a low lead content and surfaces in contact with drinking water do not have a nickel coating. The HANSAFIT range offers well-conceived complementing products for the bathtub and shower, delivering perfect solutions for "vital living" everywhere in the bathroom.

* Brass in contact with drinking water contains less than 0.3% lead.

To direct the water flow to the mobile hand shower, open the lever on the washbasin fitting and set the water flow rate and temperature as you want. Take the **Bidetta** hand shower out of its holder, press the tactile soft-touch button on the shower body, and the water starts to flow. As soon as you release the button the water flow is directed back into the washbasin. The remotely operated variant of the **Bidetta** hand shower is an additional comfort option. With it, you do not have to open the washbasin lever to make the water flow. Just take the mobile shower out of its holder and press the button.

GENERATION

COMFORT FROM A NEW SIDE: THE SIDE OPERATED HANSA|HOME FITTINGS FOR THE BATHROOM

Side operated fittings are very popular. Because what looks attractive also proves its worth in daily use: Surfaces stay clean and bright longer because the water dripping from your hands is kept away from them. That is hygienic, makes cleaning easier, and is a pleasure to see – every day, and well into the future.

HANSAVANTIS

The tall, swivelling spouts allow for more room beneath the fitting. Whether to wash your hands or fill kettles and pans: you have all the space you need.

HANSAPRIMO

What makes the ranges in the **HANSA|HOME** segment so popular is that they focus on the essentials. Comfort and convenience are key – and highly individual – factors. Personal needs have to be met, and the conditions of the specific installation have to be considered. To provide as much flexibility as possible, some **HANSA|HOME** ranges offer a variety of different fittings specially for the washbasin. You can choose between classic lever mixers, electronically controlled variants, generously proportioned XL versions and – now completely new – the state-of-the-art side-operated models of the successful HANSATWIST, HANSAVANTIS and HANSAPRIMO ranges. With their operating levers offset to the side, larger projections and correspondingly more room for the hands, these contemporary fittings offer lots of practical benefits and are very pleasurable to use.

Design in tune with personal tastes, optimally combined with the washbasin, and closely co-ordinated functionality: creating perfectly tailored comfort for everyday enjoyment.

HANSATWIST HANSATWIST XL HANSATWIST side operated

HANSA not only offers you a choice of wide-ranging designs. Different operator control concepts, lever variants, functions and sizes enable you to find just the right fitting to meet your personal comfort needs.

HANSATWIST

GENERATION

HANSATWIST

NEW VARIETY IN THE KITCHEN

HANSAPRIMO

HANSAVANTIS

The HANSATWIST, HANSAVANTIS and HANSAPRIMO kitchen classics now come in new variants featuring side operation – functionally and visually attractive alternatives to the conventional operator control concept. With larger projections and correspondingly more room for the hands, these contemporary fittings offer lots of practical benefits and are very pleasurable to use.

The extraordinary quality of HANSAFIT is also demonstrated by the fittings it offers for the kitchen. The distinctive HANSAFIT HYBRID fitting has already firmly established itself in the kitchen as an innovative all-rounder offering multiple benefits. It can be operated manually, or optionally offers a touchless sensory function. It provides a 10-second flow of pre-mixed, temperature-regulated water – ideal for a quick hand-wash, and perfect for hygienic working.

A new – and not just visually appealing – feature is the lever mixer with the typical HANSAFIT lever and “overhead” 120° swivelling spout. The 217 mm projection offers plenty of room beneath the fitting for filling tall containers for example.

The new remote control solenoid shut-off valve for the dishwasher or washing machine provides an all-round good feel. A press of the Tiptronic-Flex button opens the valve for 3 or 12 hours. After that time the valve closes automatically, safely isolating the connected appliance from the water. The button can be placed anywhere in the kitchen. The non-range-specific shut-off valve can be combined with any kitchen fittings. It can be connected to both hot and cold water directly at the angle valve.
